

BENCHES: COCO

| Category: [BENCHES](#)

PRODUCT DESCRIPTION

Designer: **ONEWORKS**

Conceived by One Works for the new City Life project in Milan and created by Lab23, COCO is one of the flagship products of the new collection, a modern design bench made of HPRC®.

A modular system, without backrest, versatile and flexible, with simple and small lines, which can be easily arranged to form different shapes and respond to different needs. The three basic elements each have the shape of a quarter circle with different diameters and combined in different ways.

HPRC® is a composite material, malleable and highly performing that allows the production of elements of any shape. HPRC® is characterized by a very high mechanical resistance (traction / compression / bending) and impermeability, it is highly resistant to shocks and atmospheric agents (salt, smog, ice, sand, etc.). The smooth and material finish and the very high ability to disperse heat / cold make it a very comfortable material even in extreme climatic situations.

An anti-graffiti material and, if necessary, repairable thanks to the repair KIT supplied on request.

An ECOLOGICAL material, produced with at least 30% recycled and 100% recyclable material, which meets the minimum environmental criteria (MEC) dictated by current regulations.

In this bench it is possible to request sitWARM®, a technology, developed by LAB23 in collaboration with the Italian company of reference in the field of electric heating, that heats the surface of the outdoor seating in a homogeneous, safe, ecological, economical and it does not require any maintenance after installation.

Materials:
HPRC
