

PLANTERS: CORAL

| Categories: [PLANTERS](#), [URBAN DESIGN](#)

PRODUCT DESCRIPTION

The CORAL planter is made in steel 30/10 thickness.

All the metal parts characterized by a coral-like texture are welded together through a continuous welding. All the angles of the planter are rounded for the safety of the user. On the lower part of the legs of the planter, an ellipsis-shaped plate (30/10 thick), with a hole of 11 mm diam. for the fixing to the ground through bolts (not provided), is welded.

Inside the planter there's a container for the plants made in galvanized and polyester powder-coated steel 15/10 thickness, or in corten.

For the realization of this product made in Italy, Steel EN10111DD11 is used and later treated with a cycle of sandblasting, cathoresis and powder coating. Such cycle is meant to guarantee the protection of the painted products, in an environment of C4 corrosion class, as requested by the UNI regulations EN ISO 12944-2. The products are eventually polyester-powder coated with RAL colours at choice.

As an alternative to steel EN10111DD11, the production in corten is also available, on demand. In this case the material is treated with a specific oxidation process.

The galvanized steel used is steel EN10346DX51D+Z and, unless otherwise stated, is not painted.

Max Dimensions:

Height: **710 mm**
Width: **530 mm**
Length: **530 mm**
Planter capacity: **44 lt**

Dimensions inner container:

Length: **410 mm**
Width: **410 mm**
Height: **340 mm**
Weight of steel: **36 kg**
