

ABRIS VOYAGEURS: VAGONCINO

| Catégories : [ABRIS VOYAGEURS / TOTEM](#), [URBAN SMART LIVING](#)

PRODUCT DESCRIPTION

Designer: [GIBILLERO Design](#)

VAGONCINO looks like a small and cozy wagon, whose backbone is made up of 4 tubular steel profiles, calendered and painted, 60 x 40 mm in size, that become ground anchoring system and cover system.

The profiles are anchored to each other thanks to a secondary formwork, steel profiles x 40 mm in size. The coverage element is obtained thanks to a thin shaped steel plate by laser, anchored to the tubular structural profiles.

Sitting elements of shelter, living in synergy with its structure, are placed on both sides, and are obtained by two lateral elements in laser-shaped steel bearing a series of painted metal profiles.

Side and rear closures are in transparent glass "Visarm Windows", polished edge, supported by steel calipers.
